Automated Bar-Code Reader

Product mixing monitor

Identifies labels, cartons, tubes etc. in the packaging environment and protects against unwanted mixing with other packaging materials, or faulty printing.

Product sorting

Identifies passing goods on conveyor and storage systems. Multi function production machinery, or monitoring equipment can be pre-programmed by the passing goods. An important element in machine time saving.

Computer connection

For transmission of code details to a remote computer, for monitoring inventories, shipments, and all general warehouse activities etc.

Replacement for laser scanner

A cost effective code recognition system in automated production lines. It can be used to replace laser systems and be used for longitudinal or transverse code reading. The system allows very high speed reading.
