CARTON COUNTER

"ADVANCED COUNTING TECHNOLOGY FOR TODAYS GLOBAL MARKET"

"THE LATEST IN STACK COUNTING TECHNOLOGY"

The Carton Counter is the latest in advanced stack counting technology for counting Printed Folded Cartons (PFC). The Carton Counter is a portable unit designed for quick and accurate counting using the hand-held scanner. This revolutionary counter cuts labour costs and provides reliable product reconciliation.

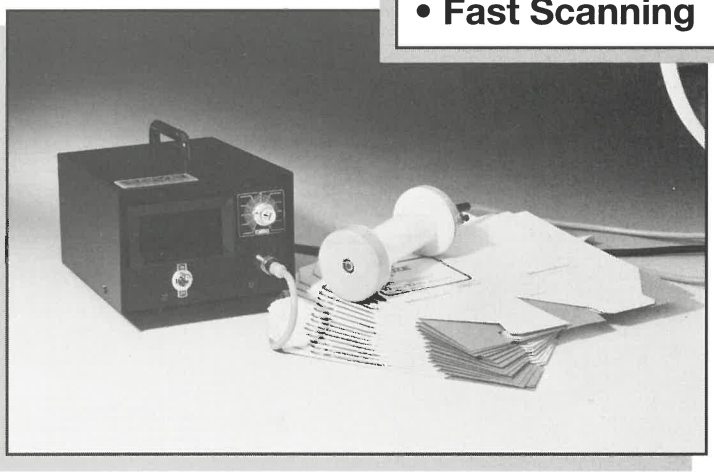
Counts Cartons of all shapes & colours

OPERATION

Designed for the pharmaceutical industry, there is no other stack counter which is easier to use. The operator passes the scanning head over the ends of the cartons and reads the total count on the large LED display. The carton count continues to be accumulated with each scan or press RESET to set the counter back to zero to start a new batch count. This feature is useful for count validation.

The Carton Counter can scan cartons of any colour, size or shape. It can also count rigid inserts stored in trays. No set-up is required. The unit is always ready for instant use.

- **Counts in seconds**
- **Validated Counting**
- **Accurate**
- **Easy To Use**
- **Fast Scanning**



SPECIFICATIONS

Scanning: 10,000 pulses / sec.

Power: 110 volts, 60 Hz frequency

Weight: 2.5 lbs

Dimensions: 8"(L) x 6"(W) x 4"(D)
